WiPL-D Pro CAD 2012 released!

FAST & EASY SOLID MODELING

- Solid modeling using built-in primitives (curves, surface bodies and solids)
- Easy manipulations and Boolean operations on objects
- Modeling in local coordinate systems

- Intuitive organization of the entire project through Project Tree
- Enhanced inspection of model in the making
- Editable history list of all actions in the project

- Full support for symbolic modeling, symmetry, GPU acceleration and other standard WiPL-D features
- Powerful mesh control
- Running simulations with a single click
- Import from and export to various CAD formats with efficient model reparation and defeaturing
